Abstract

We prove that, given $s \geq 0$ and a non-zero Borel measure μ in \mathbb{R}^m , if for μ -almost every $x \in \mathbb{R}^m$ the limit

$$\lim_{\varepsilon \rightarrow 0} \int_{|x-y|>\varepsilon} \frac{x-y}{|x-y|^{s+1}} d\mu(y)$$

exists and

$$0 < \limsup_{r \rightarrow 0} \frac{\mu(B(x,r))}{r^s} < \infty,$$

then s is an integer. In particular, if $E \subset \mathbb{R}^m$ is a set with positive and finite s -dimensional Hausdorff measure H^s and for H^s -almost every $x \in E$ the limit

$$\lim_{\varepsilon \rightarrow 0} \int_{|x-y|>\varepsilon} \frac{x-y}{|x-y|^{s+1}} dH^s|_E(y)$$

exists, then s is an integer.
